Sleep Disorders

About Us

IRMC Physician Group Sleep Disorders refers to the medical specialty dealing with the diagnosis, management, and treatment of sleep-related conditions for patients **aged 2 and up**. It is a sub-specialty within several medical specialties, including neurology, pulmonology, internal medicine, and psychiatry.

Sleep specialists are medical doctors who have completed additional training and education in this field. They can diagnose and treat a number of sleep-related conditions, including sleep apnea, restless leg syndrome, narcolepsy, and many more.

Proper sleep plays a crucial role in good health. IRMC Physician Group's sleep specialists are here to help if your life is disrupted by sleep disorders. They utilize a number of treatments to effectively treat sleep conditions and help you feel refreshed and well rested.

Conditions Treated

SLEEP APNEA

Sleep apnea is a disorder, with serious health consequences, in which breathing during sleep is interrupted briefly and repeatedly. You may have sleep apnea if you snore loudly, and you feel tired even after a full night's sleep. The main types of this condition include obstructive sleep apnea and central sleep apnea.

SNORING

Snoring happens when airflow is restricted in the passage at the back of the mouth and nose, causing soft tissue to flutter or vibrate during breathing. For instance, the soft palate at the back of the throat may become too relaxed during sleep and vibrate against the back of the throat or the tongue as air is drawn through the narrowed airway.

SLEEPINESS

Sleepiness is likely a problem for you if you have trouble waking in the morning, often feel sleepy during your waking hour, and naps don't take the edge off your sleepiness. Along with having to drag yourself through the day, you may also have a loss of appetite, trouble with thinking or memory, or feelings of irritability or anxiety.
